

### POWER DISTRIBUTION BOX BX3/3

This unit is for use at low-power relay stations. It provides 240-volt single-phase supplies for equipment from six socket-outlets. The D.C.C. code BX3/3 allocated to the unit may not appear on it or on related drawings.

Fig. 1 gives a circuit diagram. An incoming single-phase feeder is controlled by a double-pole switch and supplies the outlet sockets mounted with their fuses on the front panel of the box. The sole lighting in the station building is provided by a single lamp, also on the front panel.
