

BAND-PASS FILTER FL2/536

The FL2/536 is a band-pass filter with the pass band centred on 31.5 MHz. It is intended for use as an output filter in the MD1/503B Modulator Unit when forming part of an MD1/502 or MD1M/507 Wide Band Sound and Vision Modulator operating in Band IV or Band V. The circuit is

given in Fig. 1. The filter is built on a printed board and wired directly into circuit.
