

HIGH PASS FILTER FL3/507

FL3/507/1

NOTE:-
CONSULT DESIGNS DEPARTMENT
FOR VALUES TO SUIT FREQ.
IN USE.

Fig. 1. Circuit of the FL3/507

The FL3/507 is a high pass filter. It is intended for use in the MD1/503B Modulator when forming part of the Wide Band Sound and Vision Modulator MD1/502 and with the vision carrier below the sound carrier. Its function is to remove unwanted modulation products. The circuit is given in Fig. 1.

The filter is built on a printed board and wired directly into circuit.
