

### POWER SWITCH PANEL PA18/11

The PA18/11 comprises six fuse-switches. They are used to distribute 415-volt supplies to one half of a u.h.f. transmitter installation. The EP13/2 switchboards employ two panels PA18/11. Certain common supplies for the transmitters may be taken from either panel. To ensure that the bus-section breaker on the EP13/2 cannot be bypassed, Castell

locks have been fitted to the corresponding pairs of switches. Only one key is provided for each pair of locks to ensure that both switches cannot be closed at the same time.

Also see information applying to parent equipment EP13/2.
