

TELECINE PANEL PA1/526 and PA1/526A

The PA1/526¹ and PA1/526A² are convenient physical sub-divisions of telecine equipment and provide automatic gain control facilities for the parent equipment. The panels differ slightly in the facilities provided but both consist of the following units mounted on a PN3/23 chassis:

Waveform Suppression Unit UN1/556
A.G.C. Amplifier Detector AM3/505
Stabilised Power Supplier PS2/13H
D.C. Amplifier AM1/521
Stabilised Power Supplier PS2/13P

Motor Drive Amplifier AM1/8
Stabilised Power Supplier PS2/13F
Stabilised Power Supplier PS2/21D
On PA1/526A panels the AM1/521 D.C. Amplifier, though present, is not used.
