

SECTION 15

SWITCH UNIT UN9/515

The Switch Unit UN9/515, as used in Picture Synchronisers type UN1/522 and UN1/528, permits manual selection of either the genlock or the slave-lock mode of operation. The circuit is shown in

Fig. 15.1.

The UN9/515 is constructed on a CHI/12A chassis with index peg positions 7 and 8.
